by Belfius

START.SMART.CHARGING.

Stop paying for energy, start earning from it.

CenEnergy guarantees lower electricity costs through smart control of your energy consumption.

Combine a dynamic energy tariff with a home battery and an energy management system, and your savings are within reach.

**SMART CONTROL.
MORE SAVINGS.
REAL REWARDS.**

HOME CHARGING IS NOW EXPENSIVE. MAKE IT PROFITABLE — AND EVEN REWARDING.

Your current charging station often starts charging immediately, without taking off-peak and peak hours or your solar production into account. As a result, you charge exactly when electricity is most expensive.

Often, you charge publicly to avoid expensive home charging sessions. When you do charge at home, it's usually during peak hours, you can't take advantage of cheaper hours, and you waste your own solar energy. Users who do charge smartly and store energy save up to 30–40% on their energy bill; without a smart charging station, you therefore pay up to 40% or more too much.

OUR SOLUTION

CenEnergy supports you from the ground up. We install a reliable AC charging station that matches your driving behaviour and connect it to our CenEnergy Solutions energy management system and a dynamic tariff. This way, you automatically charge when electricity is cheap and use your own energy and/or battery optimally. Immediate savings from installation.

Are your charging costs reimbursed by your employer? Our system then ensures that you always charge below that tariff. This way, you never pay a cent too much and, in many cases, you are even paid to charge your EV.

PACK 1:

Charging station + CenEnergy Solutions
+ dynamic tariff + home battery

Maximum independence: combine a charging station with a home battery (5–40 kWh) and increase your self-consumption. You store cheap or self-produced electricity and use it when prices are high.

Savings and stability: enjoy up to 30–40% lower energy costs and avoid peak tariffs. Your EV is powered by cheap or self-produced energy and you avoid peak loads.

Home battery: to store your energy when it is free or cheap and use it when tariffs rise, thereby reducing your final energy bill.

> from **€5,859***

PACK 2:

CenEnergy Solutions +
dynamic tariff + home battery

Store energy when it's cheapest:

you store electricity when prices are low or when your solar panels produce more than you need. You use this energy during peak hours or sell it when tariffs rise.

Additional income through grid balancing:

by automatically allowing your battery to respond to imbalances in the electricity grid, you generate additional income and help keep the grid balanced.

> from **€4,267***

PACK 3:

Charging station + CenEnergy
Solutions + dynamic tariff

Complete charging solution: we install a reliable AC charger that perfectly matches your driving profile.

Smart energy management: our system integrates seamlessly with solar panels and dynamic tariffs, allowing your vehicle to charge automatically when electricity is cheap and stop when prices rise.

Benefits: lower bills, insights via the app and ready for the future.

> from **€2,590***

*Prices include 6% VAT. Prices valid until 30 April 2026.
Each package is linked to a monthly subscription.
This is configured as part of a tailor-made offer.
Prices depend on your situation and the base package.

WHY CENENERGY?

> We make smart energy accessible, profitable and simple.

Maximum savings and income

Through dynamic tariffs, grid balancing and battery control, you not only reduce your energy bill but also **generate income**.

Transparency and simplicity

We communicate in clear language; you always see how much you save and how the system works. **No hidden costs, just clear results.**

Complete peace of mind

Analysis, simulation, installation, optimisation, monitoring and support. **You don't have to do anything yourself;** we make sure everything works optimally.

Quality and scalability

Our charging stations and batteries are of **top quality, safe, and they are solutions that grow with you.**

Energy as a strategic advantage

With our solutions, energy changes **from a cost into a source of income:** you store energy at low or negative prices and consume it when tariffs are high.
